I've been riding the 2015 Trek 7.2 FX for a few months now and overall enjoy it. One of the features that attracted me to it was the option of the integrated speed/cadence sensor in the frame. Unfortunately I've had a hard time getting it locally and nobody would ship it to my location. On a recent trip to the U.S. I was finally able to pick up the Duo Trap S on Bontrager.com The sensor itself fits quite seamlessly into the bike. Just remove the plug and one screw later it's mounted. The two magnets are just as simple to mount. One clips onto a spoke and the other slides over a crank near the pedal. They include three different sizes of magnet for the crank and I had to use the largest one for the 7.2 FX. The sensor and frame have lines that show you how to position the magnets. If that didn't make it easy enough, the two round dots on the sensor actually blink when it first starts up. Trip 300 on Bontrager.com The Bontrager Trip 300 computer was just as easy to install. The mount has a rubber piece that will stretch around most any tube on your bike, and can be mounted in either orientation. The computer then just snaps into the guick release. I decided to mount it on the stem and it will probably stay there. It nestles in guite nicely in this location. The computer is pretty basic, and that's one of the things I like about it. If you move the bike the sensor wakes up automatically and the computer senses it and turns on too. They both use a standard CR2023 and should last quite a while on it. The setup is quick and painless. During the setup you can pair it with any Ant+ speed/cadence sensor and an Ant+ HRM if you like. It had no problem picking up my Garmin HRM. The little icons on the top left show you what sensors it has paired with and is currently using. After setup the controls are dead simple. The top button cycles the top display through speed, average speed, and max speed. The little triangle by the speed shows if you are currently faster or slower than your average speed. The bottom right button cycles between the clock, trip distance, trip timer, pedal cadence, heart rate (current, average, or max if you press the bottom button), Calories burned, total odometer, and the current temperature. The bottom button is the backlight. I also paired up the sensor with my Garmin Forerunner 405cx. After a quick two mile test ride the speed and distance were very close to each other. All I did on the computer was set the wheel size to 700x35. The Garmin looks like it updates some of the fields more frequently than the Trip 300, but you probably won't be staring at the two side by side to really notice most of the time. The sensor also has Bluetooth 4.0LE (low energy). I was able to pair it with my phone and apps saw it right away. I don't regularly use my phone while biking, but for those of you that do this might be quite nice. Bluetooth and Ant+ work at the same time too. I had no issues with it in use. It wakes up on it's own and pairs quickly. It doesn't have any annoying beeps or crazy menus just to display simple data. It just works, and you don't get that in a lot of gadgets these days. It's a great mix of technology, design, and usability. -Sean Senior Member Thread Starter Join Date: May 2010 Location: Northern VA Posts: 190 Bikes: Trek 5200 and Trek D.S. 8.6 Mentioned: 0 Post(s) Tagged: 0 Thread(s) Quoted: 1 Post(s) Likes: 0 Liked 0 Times in 0 Posts BONTRAGER TRIP 300/DUOTRAP S COMBO For Trek D.S? I am getting mixed reviews about this computer not working well with Trek DS. I thought DS was built for this computer? I have Trek DS 8.6 2016. Does it work with my bike or doesn't it? Last edited by Norboo; 05-25-16 at 05:08 AM. Senior Member Join Date: Apr 2015 Location: Bronx, NY Posts: 483 Bikes: 2016 Trek FX7.4 Mentioned: 1 Post(s) Tagged: 0 Thread(s) Quoted: 73 Post(s) Works fine on my FX, gives me the basic's I need and I like the clean install. One sensor and no straps or rubber bands. Senior Member Join Date: Aug 2014 Location: NW England Posts: 128 Mentioned: 0 Post(s) Tagged: 0 Thread(s) Quoted: 6 Post(s) Likes: 0 Liked 0 Times in 0 Posts I have the Trip 300/Duotrap S combo on my 2015 DS. Have done 2500+ miles with the computer. When I first got the DS like many I thought it would be the perfect accessory for my bike, with the blendr stem mount and the speed sensor integrating nicely into the chainstay. Overall it has been quite good. The main problem was that none of the 3 cadence magnets supplied, fitted close enough to the Duotrap sensor to register cadence (magnets too far apart) that though is easily remedied with a home made shim. Bontrager later released the correct size cadence magnet would not register speed all the time if not in the exact correct position. I replaced it with a CatEye magnet. No problems since then. Overall it is a good setup, although having a cadence sensor in general may be overrated for most. Having said all that I have the Garmin Edge 25 on my main bike now. For quality, simplicity, GPS tracking, app connection and ability to view data on Mobile phone or computer, it is a long way better for a bit more money. The downside though it needs charging after every 7-8 hours of use, where as I think I have only changed the batteries in the DuoTrap Combo once or twice. I would easily recommend the Edge 20 or 25 for a bit more money overall. Senior Member Thread Starter Join Date: May 2010 Location: Northern VA Posts: 190 Bikes: Trek 5200 and Trek D.S. 8.6 Mentioned: 0 Post(s) Tagged: 0 Thread(s) Quoted: 1 Post(s) Likes: 0 Liked 0 Times in 0 Posts This from Trek: The only update that was made to those was in regards to the crank cadence band- but we have since included an update kit into all of the Trip 300 packaging. If for some reason you purchase one from your local retailer, and that update kit isn't inside the box, simply let them know and they can get one from us for you. Research Dynamics(stolen) Mentioned: 1 Post(s) Likes: 0 Liked 0 Times in 0 Posts I have had it on my 8.6 ds for over a year and it is working fine, the sensor even communicates with my iPhone to record data to strava. Senior Member Join Date: Aug 2014 Location: NW England Posts: 128 Mentioned: 0 Post(s) Likes: 0 Liked 0 Times in 0 Posts At best I would say the trip 300 combo is OK. A bit uninspiring and dated looking. Top positive is that battery life is good. At the right price it is definitely good. Just seemed overpriced for the performance. Got a Garmin Edge 25 now. It is not perfect, but noticeably better than the 300. This cost a bit more and needs charging all the time but is a lot more reliable and easy to use. We did find that the 1st. computer was faulty so they replaced it and now everything is doing great. I'm glad I had the store install it so they couldn't say that I installed it wrong. Since I bought it from them as well as the bike at the same time, they didn't charge me anything to install it. I've had it for about 2 months now and I ride almost every day. No problems at all. If this was a one off, no worries, but it has happened to me on numerous occasions. Last edited by SlinkyWizard; 01-11-17 at 04:37 AM.
